Forecast/Conditions: Overnight low of 26 Saturday night following a cold and windy prior few days that will include small amounts of new snow combined with winds gusting to 25 mph, adding some woody debris to the firm snowpack. Subsequent heavy equipment grooming should mitigate any issues that occur prior to the arrival of the warming and snowy conditions that may produce 4 to 6 inches of new snow on top of the 36 inch base. This new snowfall is predicted to occur from midmorning Saturday throughout the race on Sunday with the temperature between 29 and 32 during the event. Expect soft conditions and a quick buildup of berms by lap two of the race.

Glidewax: Apply BP Red Hot Wax, scrape and brush, then apply HP Yellow Hot Wax, scrape and brush. Sprinkle on [Jet Powder](#) Yellow, make two passes with iron at 180c, let cool, scrape and brush. Polish with a merino wool roller. Then spray on [Jet Liquid](#) Yellow, let the ski dry flat for at least 20 minutes. No need to brush or polish Jet Liquid before skiing.

Gripwax: N/A

Structure: A Universal structure covered by one pass with the Yellow Structurite tool after scraping and brushing the final Hot Wax or Jet Powder but before applying Jet Liquid will best suit these conditions.

Check the [Wax Tips](#) page at TokoUS.com before all of your races for the latest waxing information. Toko Race Wax Tips offer racers precise waxing advice on how to make skis perform optimally for a given event. If you do not have High Performance wax, substitute Performance or Base Performance wax of the same color (Blue, Red or Yellow), as the temperature ranges are the same. For a more economical option, omit Jet topcoats. All Race Wax Tips recommend ONLY fluorine-free products. To see optimal application procedures for both Glidewax and Gripwax, go to the [How To](#) link at TokoUS.com.
