**Forecast/Conditions:** A continuation of classic Colorado winter conditions. Early morning air temperature will dip to around 5F with gradual warming into the upper teens by the start of the race. I expect the snow to remain dry and cold with no chance of glazing. Due to limited snow coverage on lower trails, the race start has been relocated to Blue Ridge, where coverage is more consistent.

**Glidewax:** Apply HP Blue Hot Wax, scrape and brush, sprinkle on [Jet Powder Blue](#), make two passes with iron at 180c, let cool, scrape and brush using the copper brush and polish with a merino wool roller. Then quickly (1 second) spray [Jet Liquid](#) Blue tail to tip, spread and polish using a handheld Thermo Cork, and go skiing.

**Gripwax:** Roughen base with 150 grit sandpaper, iron in Nordic Base Wax Green, cork smooth, let cool. Then apply 2-4 layers of Nordic GripWax Blue, corking smooth between layers. Racers searching for more grip can add a layer of GripWax Red and then cover with GripWax Blue.

**Structure:** A fine structure covered by one pass with the Blue Structurite tool after scraping and brushing the final Hot Wax or polishing the Jet Powder but before applying Jet Liquid will best suit these conditions.

Check the [Wax Tips](#) page at [TokoUS.com](http://TokoUS.com) before all of your races for the latest waxing information. Toko Race Wax Tips offer racers precise waxing advice on how to make skis perform optimally for a given event. If you do not have High Performance wax, substitute Performance or Base Performance wax of the same color (Blue, Red or Yellow), as the temperature ranges are the same. For a more economical option, omit Jet topcoats. All Race Wax Tips recommend ONLY fluorine-free products.
