**Forecast/Conditions:** Friday night 2"-4" snow likely with low around 24. Temperature at start in the upper 20s, snow likely with several inches expected through the morning.

**Glidewax:** Apply LF Black, scrape and brush, then apply HF Red, scrape and brush. Finish by crayoning JetStream Red, iron hot (320F) with a layer of fiberlene under the iron, traveling slowly (60 seconds) tip to tail. Brush with a dedicated nylon polishing brush and polish with a thermopad.

**Gripwax:** Roughen base with 150 grit sandpaper, iron in Nordic Base Wax Green, cork smooth, let cool. Then apply 3-4 layers of Nordic GripWax Red, corking between layers. If snow has fairly high moisture and has accumulated on the trail, layering the GripWax Red over a thin layer of GripWax Yellow can be very effective to address snow shearing under foot. Test and adjust as needed.

**Structure:** A universal grind covered by one pass with the Red Structurite tool before JetStream application will best suit these conditions. If snow has high moisture content, adding a second pass may be effective.

Check the [Wax Tips](#) page at [TokoUS.com](http://TokoUS.com) before all of your races for the latest waxing information. The Toko Race Wax Tips offer racers precise waxing advice on how to make your skis perform optimally for a given event. For racers who don't have top end waxes, skip the Fluorocarbon (JetStream) and substitute the LF or NF wax of the same color (Yellow, Red or Blue). To see optimal application procedures for both Glidewax and Gripwax, go to the How To link at [TokoUS.com](http://TokoUS.com).
