

WAX RECOMMENDATION

JNQ Holiday Sprint, Freestyle SkiX

Elver Park, Madison, WI

Saturday, December 22

10 A.M. Qualifiers, 11:20 A.M. Heats

1K course (expect course and start times to change)

2 laps

<https://www.madnorski.org/jnq/>

Forecast/Conditions: Overnight low of 23 rising to 29 at the qualifier start and to the mid-30s for heats. Manmade snow will be dirty, firm from overnight grooming, but will soften as heats are run. Partly sunny with gentle southerly winds and little chance of precipitation.

Glidewax: Apply LF Black, scrape and brush, then apply HF Red, scrape and brush. Finish by crayoning JetStream Yellow, iron hot (320F) with a layer of fiberlene under the iron, traveling slowly (60 seconds) tip to tail. Brush with a dedicated nylon polishing brush and polish with a thermopad. If the moisture at snow surface increases during heats spray an even layer of HelX 2.0 Yellow, let dry and ski. Do not brush or polish the HelX.

Structure: A universal structure covered by one pass with the Red Structurite tool followed by one pass with the Blue Structurite tool (before JetStream application) will best suit these conditions.

Check the [Wax Tips](#) page at TokoUS.com before all of your races for the latest waxing information. The Toko Race Wax Tips offer racers precise waxing advice on how to make your skis perform optimally for a given event. For racers who don't have top end waxes, skip the Fluorocarbon (JetStream or HelX) and substitute the LF or NF wax of the same color (Yellow, Red or Blue). To see optimal application procedures for both Glidewax and Gripwax, go to the How To link at TokoUS.com.
