

WAX RECOMMENDATION

Glacier Glide & Pursuit Race

Dog Creek Lodge & Nordic, Olney, MT

Sunday, January 6

9 A.M. 10K Classic, 11 A.M. 15K Skate

Mass start

<https://www.glaciernordicclub.com/events-3/glacier-glide-race/>

Forecast/Conditions: Overnight a 30 percent chance of snow, low around 23. Temperature at start in upper 20s. Snow may be a mix of old and new snow.

Glidewax: Apply LF Black, scrape and brush, then apply HF Red, scrape and brush. Finish by crayoning JetStream Red, iron hot (320F) with a layer of fiberlene under the iron, traveling slowly (60 seconds) tip to tail. Brush with a dedicated nylon polishing brush and polish with a thermopad.

Gripwax: If fairly transformed granular snow, roughen base with 150 grit sandpaper, iron in a thin layer of Nordic Base Klister Green, smooth, let cool. Then test covering the Klister Base with a thin smooth layer of Nordic GripWax Red, corking between layers. If powder snow exists, iron in a layer of Nordic Base Wax Green and cover with 3-4 layers of Nordic GripWax Red, corking between layers.

Structure: A universal structure covered by one pass with the Red Structurite tool (before JetStream application) will best suit these conditions.

Check the [Wax Tips](#) page at TokoUS.com before all of your races for the latest waxing information. The Toko Race Wax Tips offer racers precise waxing advice on how to make your skis perform optimally for a given event. For racers who don't have top end waxes, skip the Fluorocarbon (JetStream or HelX) and substitute the LF or NF wax of the same color (Yellow, Red or Blue). To see optimal application procedures for both Glidewax and Gripwax, go to the How To link at TokoUS.com.
