

WAX RECOMMENDATION

TOKO[®]

Super CXC Cup Regional Finals

Theo Wirth Park, Minneapolis, MN

Saturday, March 6

9 A.M. first race, 10K Classic U18+, 5K for U16

Individual starts (could change to mass start)

<https://www.loppet.org/events/juniorchampionships>

Forecast/Conditions: Temperature will drop below 32 after midnight with an overnight low of 25, rising to 32 at the start and 45 by noon. Sunny with little wind. Course will be 2 laps for shorter distance on manmade snow. Longer races will be three laps on a slightly different course. The snow will be prepared by PistenBully but will break down with racing traffic. Expect the snow to be heavily transformed and dirty due to the week-long stretch of above freezing temperatures.

Glidewax: Apply Base Performance Blue Hot Wax, iron, let cool, scrape and brush. Spray on Base Performance Red Liquid Paraffin, let stand overnight, then polish with the Yellow Liquid Paraffin Polishing Brush. If you do not have LP spray, apply BP Blue Hot Wax, iron, let cool, scrape and brush, followed by a layer of BP Red Hot Wax.

Gripwax: Roughen base with 150 grit sandpaper, iron in Nordic Base Wax Green, cork smooth, let cool. Then apply a layer of Nordic GripWax Red, corking smooth. Follow with two layers of GripWax Yellow and finish with a layer of GripWax Red, corking smooth between layers. If using skin skis, treat skins with Eco Skin Proof. For best performance, apply Eco Skin Proof the day before the event.

Structure: A fine structure with one pass with the Red Structurite tool followed by a one pass of the Blue Structurite tool after scraping and brushing the final BP Hot Wax layer will best suit these conditions.

Racing - Service

Check the [Wax Tips](#) page at TokoUS.com before all of your races for the latest waxing information. Toko Race Wax Tips offer racers precise waxing advice on how to make skis perform optimally for a given event. If an event allows fluorinated waxes and you choose to use them, use High Performance or Performance (Liquid Paraffin or Hot Wax) of the same color (Yellow, Red or Blue), as the temperature ranges are the same. To see optimal application procedures for both Glidewax and Gripwax, go to the [How To](#) link at TokoUS.com.
