

WAX RECOMMENDATION **TOKO[®]**

Boulder Mountain Tour

Herriman Trail, Ketchum, ID

Saturday, February 4

10 A.M.

34K/15K, Skate

Wave starts, Point-to-point

BoulderMountainTour.com

Forecast/Conditions: Overnight low on course around 15, temperature at start 20. Cold, non-transformed snow base with possible mix of small amount of new snow. Overnight mostly cloudy with 20-30% chance of precipitation. Conditions are predicted to be uniform from top of racecourse to finish without inversions. Based on decades of BMT experience, we know Toko Blue runs well. Don't get fooled by air temperature.

Glidewax: Apply High Performance Blue Hot Wax, scrape and brush well. Spray on High Performance Blue Liquid Paraffin, let stand overnight, then polish with the Polishing Brush Liquid Paraffin. If you do not have LP spray, apply BP Blue Hot Wax, scrape and brush, then apply HP Blue Hot Wax, scrape and brush.

Structure: A universal structure covered by two passes with the Blue Structurite tool after scraping and brushing the final Hot Wax layer or before spraying HP LP will best suit these conditions.

Check the [Wax Tips](#) page at TokoUS.com before all of your races for the latest waxing information. Toko Race Wax Tips offer racers precise waxing advice on how to make skis perform optimally for a given event. If you do not have High Performance wax, substitute Performance or Base Performance wax of the same color (Yellow, Red or Blue), as the temperature ranges are the same. All Race Wax Tips recommend ONLY fluorine-free products. Older HP or P Toko waxes (Liquid or Hot Wax) contain fluorine. New labels look very similar but all say PFC Free. To see optimal application procedures for both Glidewax and Gripwax, go to the [How To](#) link at TokoUS.com.
