

WAX RECOMMENDATION **TOKO**[®]

Eastern High School Championships Sprint

Rikert Outdoor Center, Ripton, VT

Saturday, March 11

2 P.M.

1.25K, Freestyle Sprint

Sprint format

<https://nensa.net/eastern-hs-championships/>

Forecast/Conditions: Overnight low 20, temperature at start 33.
Packed new snow, mostly cloudy, low wind, little chance of precipitation.

Glidewax: Apply High Performance Red Hot Wax, scrape and brush. Spray on High Performance Red Liquid Paraffin, let stand overnight, then polish with the Polishing Brush Liquid Paraffin. If you do not have LP spray, apply BP Red Hot Wax, scrape and brush, then apply HP Red Hot Wax, scrape and brush. If snow is warming up considerably and is warm or wet during heats, test HP Liquid Paraffin Yellow. In wet snow, LP Yellow can be spray and go, no brushing, buffing or waiting.

Gripwax: N/A

Structure: A universal structure covered by one pass with the Red Structurite tool after scraping and brushing the final Hot Wax or before spraying HP LP is a good start. If snow is warming up and getting softer/wetter, one pass with the Yellow Structurite tool will suit these conditions better.

Check the [Wax Tips](#) page at TokoUS.com before all of your races for the latest waxing information. Toko Race Wax Tips offer racers precise waxing advice on how to make skis perform optimally for a given event. If you do not have High Performance wax, substitute Performance or Base Performance wax of the same color (Yellow, Red or Blue), as the temperature ranges are the same. All Race Wax Tips recommend ONLY fluorine-free products. Older HP or P Toko waxes (Liquid or Hot Wax) contain fluorine. New labels look very similar but all say PFC Free. To see optimal application procedures for both Glidewax and Gripwax, go to the [How To](#) link at TokoUS.com.
