---

**Forecast/Conditions:** Overnight low of 5F rising to 7F – 15F during the races. Mostly cloudy with slight wind from the NW. A 20 percent chance of snow beginning at noon. Expect a well-groomed racing platform of old manmade snow mixed with the natural snow expected on Sunday evening into Monday.

**Glidewax:** Apply HP Blue Hot Wax, scrape and brush, spray on HP Liquid Paraffin Red, let stand at least 2-4 hours, then polish with the Polishing Brush Liquid Paraffin. If you do not have LP, apply BP Blue Hot Wax, scrape and brush, then apply HP Blue Hot Wax, scrape and brush.

**Gripwax:** Roughen base with 150 grit sandpaper, apply a thin layer of Nordic Base Klister Green, heat and smooth. While still warm, apply a thin layer of Nordic Klister Blue, smooth, let cool. Cover with 1-2 layers of Nordic GripWax Blue, corking lightly corking between layers.

**Structure:** A fine or universal structure covered by one pass with the Blue Structurite tool after scraping and brushing the final Hot Wax will best suit these conditions.

Check the [Wax Tips](#) page at [TokoUS.com](http://TokoUS.com) before all of your races for the latest waxing information. Toko Race Wax Tips offer racers precise waxing advice on how to make skis perform optimally for a given event. If you do not have High Performance wax, substitute Performance or Base Performance wax of the same color (Yellow, Red or Blue), as the temperature ranges are the same. All Race Wax Tips recommend ONLY fluorine-free products. Older HP or P Toko waxes (Liquid or Hot Wax) contain fluorine. New labels look very similar but all say PFC Free. To see optimal application procedures for both Glidewax and Gripwax, go to the [How To](#) link at [TokoUS.com](http://TokoUS.com).
